

Lead Magnet — Training Doc

For use with Claude Projects — upload this doc to your project and keep it there. The principles section is your foundation; the Example Library at the bottom grows with every script you write.

NOTE — THIS DOCUMENT IS FOR CLAUDE, NOT FOR YOU

Upload this doc to your Claude project and leave it there. Claude reads it to understand scriptwriting principles and refer to your example library. You don't need to read or copy anything from it during a session.

1. The Core Framework

This is your starting structure. Apply it consistently and the rest of the process becomes significantly easier.

Video Structure

Every video

Hook — Pull the viewer in from the first seconds

Segments — Any number, each with its own mini-payoff

Mid-CTA — Optional, roughly 20–50% through the video

End-screen CTA — Your final ask

Segment Structure

Every segment — no exceptions — follows this pattern:

Every segment

Setup — Open curiosity and set the stakes for this segment

Tension — Build toward the payoff without giving it away

Payoff — Deliver the mini-payoff cleanly and move on

2. Hooks

The one rule: A hook has one job — assert the promise. Not demonstrate the method, not walk through an example. The hook tells the viewer who this is for, what will change for them, and what's at stake if they don't watch.

The 3 Components

Don't try to write the hook from scratch. Write these three components first, then combine them.

For education / how-to content

Target — Who specifically is this for? Not just an audience type — that audience + their specific goal.

Transformation — What exactly will they be able to do or know that they can't now?

Stakes — Why does it matter emotionally? What are they losing right now by not having this?

For entertainment content

Character — Who is this about?

Concept — What is happening?

Stakes — What's at risk?

Before & After

✗ Vague

✓ Specific

A lot of people struggle to save money even on a decent salary.

If you're earning good money but still reaching the end of every month with nothing to show for it — no savings, no buffer, no chance of a holiday this year...

3. Stakes

Most creators add stakes to their hook and move on. Their retention still tanks mid-video — and they can't figure out why. The reason: stakes don't just belong in the hook. They belong in every setup too.

The two placements

1. The Hook — pulls the viewer in from the first seconds
2. Every Setup — renews the viewer's reason to keep watching throughout the video

Setup Stakes Formula

Every setup needs both halves

Part 1: Here's what's coming

Part 2: Here's what it costs you to ignore it — tied back to the reason the viewer originally clicked

✗ Missing the cost (weak)	✓ Both halves (strong)
<i>Next, let's talk about rest days. I'm going to show you how to figure out the right number based on your body type.</i>	<i>Next, let's talk about rest days. Because if you're getting this wrong — and most people are — you're actively undoing the gains you already made.</i>

The Diagnostic Test

Read each sentence of your setup or hook and ask: "Why should I care?" If the next sentence doesn't answer that question and tie back to the reason the viewer clicked — the chain is broken. The moment the chain breaks, the viewer's brain drifts.

How to Find Stakes That Hurt

When the right stakes aren't obvious, keep asking why until you hit something that actually stings.

Why will this video help the viewer? → They'll get better at saving money.

Why does that matter? → They reach the end of every month with nothing left over.

Why does that matter? → They can't build any financial security.

4. CTAs

Most creators ask for a like or subscribe, or simply say 'watch this next'. Both are asking the viewer to do you a favour. The 3-step formula flips this — you're offering them something. It works because it feels like a new segment is starting, not like the video is ending.

End-Screen CTA: The 3-Step Formula

End-screen CTA

Step 1 — Link: Make a point connecting back to something covered in the current video.

Step 2 — Curiosity Gap: Introduce something new and surprising related to that point. Widen the gap without closing it.

Step 3 — Promise: Specify the transformation they'll get in the next video. Be specific — not 'learn more about X' but the exact thing they'll walk away knowing.

Mid-CTA Rules

- **Land after a setup, not after a payoff.** Post-payoff is the moment of lowest tension — place the mid-CTA while the hook is still live.
- **Only after substantial value has been delivered.** S2 or later as a rule of thumb.
- **One casual re-entry word is all you need.** "So..." or "Anyway." — never use a bridging phrase that acknowledges the interruption.
- **Use once only.**

Choosing the Right Angle

✗ Wrong placement

*End-screen → step-by-step practical guide
(useful but not surprising)*

✓ Right placement

End-screen → the most novel or curiosity-inducing idea

Mid-CTA → the practical, actionable offer

5. Your Example Library

This section is built automatically. After every script, Claude will identify the strongest example from each category and add it here. Over time this becomes your personal reference library — calibrated to your niche and your voice.

Hooks
